

Business Problem Statement

The bank manages a large and diverse credit card customer base, making it challenging to continuously monitor customer spending behaviour, transaction performance, and credit risk. Business teams often rely on multiple reports and raw data, making it difficult to quickly identify revenue opportunities, understand customer segments, and detect potential risks such as delinquent accounts and high credit utilization.

Without a centralized reporting solution, decision-makers lack a clear view of key business metrics and customer trends, which can lead to missed opportunities for revenue growth, ineffective marketing strategies, and delayed risk management.

To address these challenges, this Credit Card Analytics Dashboard was developed to provide an interactive and comprehensive view of the bank's credit card portfolio. The dashboard enables stakeholders to monitor key performance indicators, analyze customer behaviour, identify high-value customer segments, evaluate credit risk, and uncover actionable insights that support data-driven business decisions. Ultimately, the goal is to improve customer engagement, optimize credit policies, reduce financial risk, and drive sustainable business growth.

Deliverables

Data Preparation (Excel)

Cleaned and validated raw customer and transaction datasets by handling missing values, correcting data types, and removing inconsistencies to ensure accurate analysis.

Data Loading & Transformation (SQL)

Loaded the cleaned data into SQL and performed data transformation, filtering, and aggregation to prepare a structured dataset for reporting and analysis.

Visualization & Insights (Power BI)

Developed an interactive Power BI dashboard with KPIs, charts, and filters to analyze customer behaviour, transaction trends, revenue performance, and credit risk, enabling stakeholders to make data-driven decisions.

Report & Presentation

Prepared a comprehensive project report summarizing the business problem, key findings, actionable insights, and strategic recommendations for stakeholders.

GitHub Repository

Organized and documented all project resources, including datasets, SQL queries, Power BI dashboard files, reports, and presentation materials in a well-structured GitHub repository.
